Product Introduction

Project Cargo is quite simply much bigger, heavier, and more challenging to carry than the traditional goods that make up cargo in transit throughout the world:

A Project Cargo Critical Item shall display one or more of the following characteristics:

1. All equipment, plant and materials on the critical path and which in the event of loss during transit /storage, cannot be repaired, remanufactured, replaced, reshipped, installed, tested and commissioned within sufficient time to arrive at the Project site in the time to facilitate the Scheduled Commercial Operation Date.
2. Furthermore, it is likely to have one or more of the following characteristics:
 - Where the unit price of an item of the Project cargo is valued in excess of INR 25 crore (or equivalent in other currency) and shall be shipped in break-bulk, unless otherwise agreed by the Insurer in writing.
 - Any item which including packing has dimensions in excess of 12 M length and/or 2.5 M wide and/or 2.5 M high and hence cannot fit inside a standard 40' container or equivalent road trailer.
 - Any item including packaging with a weight in excess of 50 MT, unless otherwise agreed by the Insurer in writing.
 - Tug and/or Barge Shipments
 - Any item which requires special handling due to its characteristics and/or any item having special requirements for loading, unloading, lashing and securing.
 - Passenger Boarding Bridges (PBB)
 - Where Single Item has Centre of gravity off balance
 - On-deck shipments (where non containerized)

Project Cargo is exposed to many of the risks associated with the movement of goods, including the perils of the sea, loading and unloading to and from a variety of conveyances and, on land, all the perils that are usually found in transit by road or rail. The risk of theft is much less with Project Cargo but, to counter this, there are greater risks associated with its handling and general movement.

This type of cargo usually requires specially adapted vehicles and ships for its carriage. The bigger risk, in terms of the stability of a typical load of Project Cargo, is that of the road carrier. This is because the load to be carried represents a great proportion of the weight of the carrying vehicle than such a load bears to the total weight of a ship.

Project Cargo is not necessarily always restricted to cargo that is large and difficult to handle. Smaller pieces of equipment, such as computers and similar electronic equipment, will usually form an integral part of the project, and may be critical to its whole operation. As severe weather episodes demonstrate, it doesn't take much to knock out a relatively small-sized piece of equipment, as seen in the example of heavy rain and flooding, which recently brought a whole airport complex to a grinding halt. So the lesson to be learned here is, large or small, the criticality of any one item for a project is a significant factor that the Project Cargo underwriter must bear in mind when assessing the risk.

Project Cargo also covers the costs involved in a delayed start to the project. This is known as Delay In Start-Up (DSU) insurance. It provides indemnity for:

- A. Loss of Gross Profit following delay in Scheduled Commercial Operation Date, or
Fixed Costs and/or Debt Service following delay in Scheduled Commercial Operation Date.
- B. Increased Cost of Working in conjunction with (A) above.
